DETAILED ACTION

Claim Objections

1. Claim 1 is objected to because of the following informalities: in line 8, the word "form" should be changed to "from". Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Singh et al (US 2001/0009740) in view of Kinn et al (US 2002/0160259). The Singh reference teaches a nickel metal hydride battery comprising a positive electrode including a nickel hydroxide active material, a negative electrode including a hydrogen storage alloy active material, and an alkaline electrolyte comprising potassium hydroxide and lithium hydroxide (See paragraph [0008] & [0028]). However, the reference does not expressly teach a separator that has a hi-pot resistance greater than 400 volts, an ionic resistance less than 15 ohm-cm, an absorbency between 30% and 50%, an absorbency between 35% and 48%, an absorbency between 38% and 46%, a hi pot resistance greater than 500 volts, an ionic resistance less than 12 ohm-cm, or an ionic resistance less than 10 ohm-cm. The Kinn reference teaches the same separator with the same properties listed above. Therefore, it would have been obvious to one of

ordinary skill in the art at the time the invention was made to modify the Singh nickel metal hydride battery to include the Kinn separator because the Kinn separator has enhanced wettability and strength that would improve the performance of the battery.
